**Computer methods
in applied
mechanics and
engineering**

Subject Index of Volume 145

Asymptotic methods

- A refined asymptotic theory and computational model for multilayered composite plates,
J.-Q. Tarn and Y.-B. Wang 167–184
- Homogenization of a thermal problem in the plate of a heat exchanger, M. Taghite,
A. Rahmattulla, H. Lanchon-Ducauquis and K. Taous 381–402

Boundary layers

- Homogenization of a thermal problem in the plate of a heat exchanger, M. Taghite,
A. Rahmattulla, H. Lanchon-Ducauquis and K. Taous 381–402

Collocation method

- Nonlinear stress analysis problems by spectral collocation methods, A. Cividini and
E. Zampieri 185–201

Coupled problems

- Seismic response of reinforced concrete buildings close to deep excavation, Y.L. Mo and
J.M. Hwang 117–134

Dynamics

- A comprehensive unified set of single-step algorithms with controllable dissipation for
dynamics. Part I. Formulation, S.C. Fan, T.C. Fung and G. Sheng 87–98
- A comprehensive unified set of single-step algorithms with controllable dissipation for
dynamics. Part II. Algorithms and analysis, S.C. Fan, T.C. Fung and G. Sheng 99–107

Elasticity

- Differential cubature method: A solution technique for Kirchhoff plates of arbitrary shape,
K.M. Liew and F.-L. Liu 1–10
- TRIC: a simple but sophisticated 3-node triangular element based on 6 rigid-body and 12
straining modes for fast computational simulations of arbitrary isotropic and laminated
composite shells, J. Argyris, L. Tenek and L. Olofsson 11–85
- A refined asymptotic theory and computational model for multilayered composite plates,
J.-Q. Tarn and Y.-B. Wang 167–184
- Nonlinear stress analysis problems by spectral collocation methods, A. Cividini and
E. Zampieri 185–201
- Assessment of continuum models for sandwich panel honeycomb cores, W.S. Burton and
A.K. Noor 341–360

Finite difference methods

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227–238

Finite element and matrix methods

- TRIC: a simple but sophisticated 3-node triangular element based on 6 rigid-body and 12 straining modes for fast computational simulations of arbitrary isotropic and laminated composite shells, J. Argyris, L. Tenek and L. Olofsson 11– 85
- A comprehensive unified set of single-step algorithms with controllable dissipation for dynamics. Part I. Formulation, S.C. Fan, T.C. Fung and G. Sheng 87– 98
- A comprehensive unified set of single-step algorithms with controllable dissipation for dynamics. Part II. Algorithms and analysis, S.C. Fan, T.C. Fung and G. Sheng 99–107
- Nonlinear stress analysis problems by spectral collocation methods, A. Cividini and E. Zampieri 185–201
- Parameter sensitivity of inelastic buckling and post-buckling response, M. Kleiber and T.D. Hien 239–262
- The equilibrium method for local, a posteriori, pointwise estimation of the finite element error, J. Hugger 263–283
- Large displacement analysis of thin plates and shells using a flat facet finite element formulation, J.L. Meek and S. Ristic 285–299
- 3D simulation of fluid–particle interactions with the number of particles reaching 100, A.A. Johnson and T.E. Tezduyar 301–321
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329–339

Fluid mechanics

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227–238
- 3D simulation of fluid–particle interactions with the number of particles reaching 100, A.A. Johnson and T.E. Tezduyar 301–321
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329–339
- Non-overlapping domain decomposition methods for adaptive hp approximations of the Stokes problem with discontinuous pressure fields, P. Le Tallec and A. Patra 361–379

General Rayleigh–Ritz and Galerkin techniques

- 3D simulation of fluid–particle interactions with the number of particles reaching 100, A.A. Johnson and T.E. Tezduyar 301–321
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329–339

Heat and diffusion

- Homogenization of a thermal problem in the plate of a heat exchanger, M. Taghite, A. Rahmattulla, H. Lanchon-Ducaquis and K. Taous 381–402

Incompressible and near incompressible media

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227–238

Nonlinear dynamics of systems

- A comprehensive unified set of single-step algorithms with controllable dissipation for dynamics. Part I. Formulation, S.C. Fan, T.C. Fung and G. Sheng 87– 98
- A comprehensive unified set of single-step algorithms with controllable dissipation for dynamics. Part II. Algorithms and analysis, S.C. Fan, T.C. Fung and G. Sheng 99–107
- Seismic response of reinforced concrete buildings close to deep excavation, Y.L. Mo and J.M. Hwang 117–134
- Qualitative analysis of non-linear dynamical systems, J. Agarwal, D.I. Blockley and N.J. Woodman 135–145

Nonlinear mechanics

- TRIC: a simple but sophisticated 3-node triangular element based on 6 rigid-body and 12 straining modes for fast computational simulations of arbitrary isotropic and laminated composite shells, J. Argyris, L. Tenek and L. Olofsson 11– 85
- Qualitative analysis of non-linear dynamical systems, J. Agarwal, D.I. Blockley and N.J. Woodman 135–145
- Parameter sensitivity of inelastic buckling and post-buckling response, M. Kleiber and T.D. Hien 239–262

Numerical solution procedures

- The equilibrium method for local, a posteriori, pointwise estimation of the finite element error, J. Hugger 263–283
- 3D simulation of fluid-particle interactions with the number of particles reaching 100, A.A. Johnson and T.E. Tezduyar 301–321
- An improvement of convergence in Newton's method, S. Lopez 323–327
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329–339
- Non-overlapping domain decomposition methods for adaptive hp approximations of the Stokes problem with discontinuous pressure fields, P. Le Tallec and A. Patra 361–379

Optimization and design of structures

- Qualitative analysis of non-linear dynamical systems, J. Agarwal, D.I. Blockley and N.J. Woodman 135–145
- Passive and active design of hard disk suspension assemblies using multiobjective optimization techniques, Y.-P. Yang and C.-C. Kuo 147–166

Phase changes

- Spreadsheet simulation of the moving boundary of the one-phase Stefan problem, A. Kharab 217–225

Plasticity

- Nonlinear stress analysis problems by spectral collocation methods, A. Cividini and E. Zampieri 185–201
- Parameter sensitivity of inelastic buckling and post-buckling response, M. Kleiber and T.D. Hien 239–262

Shells and plates

- Differential cubature method: A solution technique for Kirchhoff plates of arbitrary shape, K.M. Liew and F.-L. Liu 1– 10
- TRIC: a simple but sophisticated 3-node triangular element based on 6 rigid-body and 12 straining modes for fast computational simulations of arbitrary isotropic and laminated composite shells, J. Argyris, L. Tenek and L. Olofsson 11– 85
- A refined asymptotic theory and computational model for multilayered composite plates, J.-Q. Tarn and Y.-B. Wang 167–184
- Assessment of continuum models for sandwich panel honeycomb cores, W.S. Burton and A.K. Noor 341–360

Solution of differential equations

- Differential cubature method: A solution technique for Kirchhoff plates of arbitrary shape, K.M. Liew and F.-L. Liu 1– 10
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329–339

Solutions of ordinary and partial differential equations

- 3D simulation of fluid-particle interactions with the number of particles reaching 100,
A.A. Johnson and T.E. Tezduyar 301-321
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329-339
- Homogenization of a thermal problem in the plate of a heat exchanger, M. Taghite,
A. Rahmattulla, H. Lanchon-Ducaquis and K. Taous 381-402

Stability in structural mechanics

- A perturbation method for the determination of the buckling strength of imperfection-sensitive structures, B. Wu and Z. Wang 203-215
- Parameter sensitivity of inelastic buckling and post-buckling response, M. Kleiber and T.D. Hien 239-262

Structural mechanics

- Differential cubature method: A solution technique for Kirchhoff plates of arbitrary shape,
K.M. Liew and F.-L. Liu 1- 10
- TRIC: a simple but sophisticated 3-node triangular element based on 6 rigid-body and 12 straining modes for fast computational simulations of arbitrary isotropic and laminated composite shells, J. Argyris, L. Tenek and L. Olofsson 11- 85
- Qualitative analysis of non-linear dynamical systems, J. Agarwal, D.I. Blockley and N.J. Woodman 135-145
- Assessment of continuum models for sandwich panel honeycomb cores, W.S. Burton and A.K. Noor 341-360

Systems of linear and nonlinear simultaneous equations

- An improvement of convergence in Newton's method, S. Lopez 323-327

Transport phenomena

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227-238
- 3D simulation of fluid-particle interactions with the number of particles reaching 100,
A.A. Johnson and T.E. Tezduyar 301-321
- $b = \int g$, F. Brezzi, L.P. Franca, T.J.R. Hughes and A. Russo 329-339

Turbulence

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227-238

Viscous flow

- A wall-distance-free low $Re\,k - \epsilon$ turbulence model, U. Goldberg and D. Apsley 227-238
- Non-overlapping domain decomposition methods for adaptive hp approximations of the Stokes problem with discontinuous pressure fields, P. Le Tallec and A. Patra 361-379

Wave motion

- A numerical method for axisymmetric wave propagation problem of anisotropic solids,
K. Liu, X. Li and X. Sun 109-116
